

ABSTRACT

In an information recording/reproduction apparatus (Arp),
a preprogrammed recording specifying unit (1, As) specifies a date
5 of distribution, a time of distribution, and a distribution source
of information as well as an information recording unit (BD).
Further, a preprogrammed recording setting displaying unit (8)
displays a preprogrammed recording setting (As) on a two
dimensional matrix (7), and a preprogrammed recording setting
10 specifying unit (20) specifies each (8) preprogrammed recording
setting (As) displayed on the two dimensional matrix. In addition,
a preprogrammed recording setting displaying unit (30) displays
the specified preprogrammed recording setting (As), and the
preprogrammed recording setting editing unit (30) edits the
15 preprogrammed recording setting (As).
